

Introducing Quantum Viswalaya: A Transformational University for the 21st Century

This is the formal announcement of a post-graduate transformational education program integrating science and spirituality and based upon the quantum worldview. **Quantum Viswalaya, a transformational university, is established under the auspices of the Center for Quantum Activism, World Headquarters, Jaipur, India.** Classes will begin on September 1, 2018.

Briefly, the purpose of transformational education is to bring congruence into your life, congruence between how you think, how you live, and how you make your living. You can do it all using quantum principles, integrating science and spirituality in your life.

Professor Amit Goswami, Ph.D., a renowned quantum physicist and consciousness researcher, formerly a professor of physics at the University of Oregon, a pioneer of the quantum worldview, and the founder of the movement of quantum activism, will head an international team of medical doctors, psychologists, artists, business professionals, and entrepreneurs to conduct the actual training.

Currently, we are recruiting students from India and all over the world for a first-year certification in Quantum Science and Consciousness Studies. Before the year is over, we will have a fully developed two-year Master's program and a 3-5-year Ph. D. program in place. First-year certification will count as year one of both the Master's and Ph.D. programs for those students seeking an advanced degree.

After successful completion of first-year training, students will be encouraged to work toward building a quantum village featuring a live application of transformed living according to the quantum worldview that the quantum activism movement is about.

Students with at least a Bachelor's degree and professional training or equivalent in one of the following areas may apply to the following:

- Health and Healing (physical or mental)
- Economics and Business
- Arts and Society

First-year training will consist of three trimesters comprised of both proximity and distance education via the internet. The dates for proximity education are as follows:

Trimester I. September 1-16, 2018

Trimester II. Feb 1-16, 2019

Trimester III. July 20-Aug 4, 2019

The first trimester will be devoted to self-development; the second to professional development; the third, to integration and application toward building a quantum village.

We estimate that tuition, room and board during proximity education for international students will cost between 4,500-6,000 USD.
